Note: In order to find when a person will reach the legal blood or breath alcohol level, find the blood or breath alcohol level reading in the left hand column, go across and find where the blood or breath

1 alcohol level reading is an alcohol concentration equivalent (as defined
2 in IC 9-13-2-2.4) to below eight-hundredths (0.08) gram of alcohol per
3 one hundred (100) milliliters of the person's **whole** blood or per two
4 hundred ten (210) liters of the person's breath, then read up that column
5 to find the minimum number of hours before the person can be
6 released. **However, for purposes of this section, if a test to**
7 **determine the alcohol concentration equivalent in grams of alcohol**
8 **in a person's blood is conducted on the person's blood serum**
9 **instead of on the person's whole blood, the amount of the alcohol**
10 **in grams referred to in this section must be multiplied by one and**
11 **two-tenths (1.2) to determine the correct alcohol concentration**
12 **equivalent in grams of alcohol in the person's blood.**
